When reliability matters, insist on the real thing. From filters to customization kits, authentic Cummins Onan Green Label parts are made for the exact specification of the product to maximize the power and lifespan of your Cummins Onan RV generator. Green Label Parts are available at most Cummins Onan dealers or distributors. If parts are not available on the spot or if it is more convenient, you can order parts on this site to be sent to addresses in the United States. Parts of the service and manual are available for most RV generator models and include this: If you're having trouble finding what you're looking for, someone's here to help. Get in touch. Onan Marquis 7000 ListRV2.com RV community - are you ready to start a new improvement on your RV or need help with some service? Do you need advice on what products to buy? Or maybe you can give others some advice? No matter where you fit in you will find that RV2 is a great community to join. Best of all it's totally FREE! You are currently viewing our boards as a guest, so you have limited access to our community. Please take the time to sign up and you will get a lot of great new features including; be able to participate in discussions network with other RV owners, see fewer ads, upload photos, create an RV blog, send personal messages and much, much more! What is this specification? I have the Marquis 7000 NHM. Spec D I can send along.6250 generator parts manual, Onan Mccck generator control parts, cypress. Generator, onan marquis 7000 handmade generators, lyfan generator parts, Olympic. There is also a manual for servicing spec J-P (in case you don't know, the specification is the last letter in the serial number). And a general Onan service guide. Let me know which (or all) you may be interested in. What do you want to do/fix? I'm not a 7000 master yet, but I get there out of necessity. It's possible I might already run into your problem. OH, you may also want to check on: The people over there were awesome! Hi, I have the Onan Marquis 7000 Model 7nhmfa26105c. I was wondering if anyone had any guide to this model. Also, my fuel pump and/or solenoid went bad. Has anyone had any more experience replacing the pump and solenoid than the original one from Onan? Thank you in advance for any help. Am I new to the place? Bob This guide covers your model, I believe. The fuel pump is a special low pressure pump. People learned the hard way by trying to install a shared electric fuel pump off the shelf. As for solenoid, if you find specifications on the original, a replacement can be found from the same Onan Marquis 7000 Parts List-Hello, I'm looking for parts, and a maintenance guide for my generator Onan Marquis 7000. Serial L900363626 Model 7NHMFR26106B I also have a few problems, I was hoping that you guys could solve. There's gas in the oil, need to recover, but hopefully it's a carb or fuel pump bound? At first I thought it was really old butter, so I put in a new oil and ran it for hours one day. It worked great. The next day I ran it again, but it stopped while I used it. I checked the oil and it was black and thin. It smelled like gas. I tried to restart it, but the F1 fuse was blown up. I blew five standard fuses (not a slow kick) after that. When trying to start it would flip about 3 times, then kick the standard (not a slow blow fuse). What do you guys think? Do I need a new control board? New fuel pump? The generator is in a different state and I don't have access to it, so it's kind of a theoretical exercise until I get back there to work on it. Thank you for your help. When he ran was to throw out black smoke, (running too rich)? I also have 7NHM. Yours was built in December 1990, and this specification is the B Has factory electric gas pump. If the gas cylinder above the gas gene can siphon through the carb, if the valve float leaks. If the gas cylinder gets pressure from the hot and that can make the gas flow if the valve float leaks too if my gene sits for a few months the gas in the carb bowl dries up and falls down. Sometimes it gets stuck and doesn't turn off the gas flow. But when the mine does that the gas flows from the carbohydrates directly to the ground when the pump is running. Pressing the carb with a small wrench frees it. Manual numbers and a link to them. BGM-NHM-SERVICE-965-0531B NHM- SPEC a-h -(9-98)-PARTS 940-0230 BGM-NHM-INSTALL-(5-92) -965-0631 BGM-NHM-OPERATOR- (3-93)-965-0131 Scheme for your generation is on the page B-3 of the manual (at the end) F1 blows. Can try a slow blow fuse as it calls. The Reg fuse can respond to pulses from the gas pump. Look at the control board for any obvious signs of burns or shorts. I think some power wiring coming out of the control board is cut to the ground. Check the wires for shorts and abrasions, and disable the remote switch in gen to isolate any shorts in the remote wiring. Explain something Master Yoda will. Don't waste your money until you read the manual and understand the test. Do the test first to prove that the item is bad. Both sparks plug the fire at the same time. It will work on one and will carry part of the load. The basket in the carb will also cause gas in the oil. Ask any question you need. We have a very good team of people here. Always ready to help. Even us cranky old farts Welcome to stak. Thank you, I'm here to learn. Looks like I've found the right place and the right people. Yes, it will take me a bit to digest these guides. Don't buy I don't need a goal. Wasting no time with the lost business as well. No black smoke while he was running. Remove the gas lid to depressurize the system I'm suggesting? Yes I've read that if the aperture of the fuel pump is bad it can leak into the cranked body? That's for mechanically operated pumps installed on the engine block, if their aperture leak fuel can drip through the unit into the oilpan. Your electric is so not attached to the unit, so don't drip the way into the oil. But if the carb float stuck the gas could through the carb in consumption, it was up to the oil I used the skill seen when it happened. Genny was revving down and I started to see the skill and instead of revving again like before he just stopped. So maybe it was too much to draw at the wrong time that blew the fuse? The steward on this gene is electronic, think it uses a bit of current, maybe the normal fuse you used responded to the brief increase in current demand. Try a slow impact guard as it calls for . . . Genuine Cummins Onan Green Label Parts are available from all certified Cummins Onan RV dealers and parts. Maintenance parts can also be ordered online cumminsonanstore.com in the U.S. and on shopcummins.ca in Canada. Cummins Onan parts are different from suitable parts Don't agree to aftermarket parts or fits. The authentic Cummins Onan details provide the durability and performance you'd expect from Cummins Onan. They're original. Below are some parts that you'll get used to checking and changing within your maintenance routine, as well as reasons for choosing Cummins Onan parts. Air Filters Genuine Cummins Onan Air Filters are designed with a special pre foam cleaner, for use specifically in RV generators. Other manufacturers' air filters may contain lighter-density filter paper, and surface seals can eventually get hard and crack, allowing dirty air into the engine's let-in system. Over time, it takes about a thimble of dirt to wear out piston rings and cylinders. (Replacing filters for some older models may not include a pre-cleaner.) Spark Plugs Genuine Cummins Onan ignition candles come gaping properly from the factory for your engine generator RV ignition candles, purchased from other sources, gaping for car engines that gape much more. When re-scraped, the ground strap must be bent and it cannot cover the entire electrode, which will shorten the life of the ignition candle. Cummins Onan RV oil filters are equipped with valves that allow oil to bypass the oil filter during cold launches, or if the filter becomes connected. Oil filters of other manufacturers often do not have bypass valves. Since these will-rii garbage trap filters, fasting oil pressure can occur, leading to high oil pressure, failed pads and even engine damage. Other be-suited oil filters contain bypass valves, but they don't determine on what the FSI valve opens. If the setting is too high, the paper filter element may be damaged during a cold start, rendering it useless, or cause the engine to starve oil. Customers have comments that the replacement of oil (part of the #122-0833) they purchased for their Cummins Onan Silent Diesels, appearing to be the wrong size. We hear it a lot! The #122-0833 filter replaced the #185-5801 filter and the #185-5409 filter. Despite the difference in appearance, it will fit your kit and the oil ring will provide a proper seal. OnaMax oil update is available in the second quarter of 2020. Cummins to offer all-new SAE10W-30 SAE10W-30 oil for petrol and liquefied petroleum (LP) generators Onan RV. The new weight of oil offers the same great benefits that you will find with our product SAE15W-40. An identical blend of motor oil used in the production of an RV generator. Protects against wear and tear in air or water-cooled engines. Designed to give protection against oxidation and increased oil viscosity to help reduce engine wear and oil consumption. Provides excellent protection in water-cooled engines where there may be experienced high speeds or longer runoff intervals. Learn more about OnaMax Oil Cummins Onan nationwide network of distributors and dealers can help you with parts and maintenance to keep your Cummins Onan R. generator installed in peak condition. To find the nearest location, call toll-free at 1-800-888-6626 or log in to our dealership locator. RV Guides Looking for R. Generator Leadership?
